

Kernel Compilation Steps

Main Steps:

- 1- Download the kernel source from here:
<https://drive.google.com/drive/folders/1UxqWbnf4FO9a4P85Xn9idhfb8kgzEYFB?usp=sharing>
- 2- Unzip the downloaded file
- 3- Open your terminal and write down the following commands:
 - make oldconfig
 - make menuconfigChange the name of your customized kernel and save the changes
 - make
 - make modules
 - sudo make INSTALL_MOD_STRIP=1 modules_install
 - sudo make INSTALL_MOD_STRIP=1 install
- 4- Reboot your VM
- 5- Press shift left while rebooting, you should see your new kernel in addition to the main one.
